ALI RAZA

DevSecOps Engineer · Cloud Infrastructure · Cybersecurity

infoman55.it@gmail.com | Lahore, Pakistan | in LinkedIn | ⌥ GitHub

PROFESSIONAL SUMMARY

High-achieving Computer Science student with a verified 3.85 GPA and deep specialization in DevSecOps, cloud-native infrastructure, and secure full-stack engineering. Proven ability to design containerized applications, architect RESTful APIs, and implement security-first pipelines aligned with industry standards. Combines the technical rigor demanded by FAANG-caliber engineering roles with the cross-functional communication skills that drive team delivery. Actively seeking a high-impact internship or entry-level role where engineering excellence meets real-world scale.

TECHNICAL SKILLS

DevSecOps & CI/CD	Docker · Kubernetes · GitHub Actions · Linux · Bash · Git · Infrastructure as Code
Cloud & Platform	AWS (EC2, S3, IAM, VPC) · Cloud Automation · Environment Provisioning · Serverless Basics
Languages	Python · JavaScript · Node.js · Django · C / C++ · HTML5 · CSS3
Data & APIs	MongoDB · RESTful API Design · JSON · CRUD Architecture · Mongoose ODM
Security	Ethical Hacking · Network Security · JWT Auth · Input Sanitization · Threat Modeling · OWASP Top 10
Tools & Practices	VS Code · Postman · GitHub · Agile / Scrum · OOP · Clean Code · MVC Pattern

PROJECTS

Shopcart Pro — Full-Stack E-Commerce Platform

Django · MongoDB · REST · Docker-Ready

Stack: Django, JavaScript, MongoDB, HTML/CSS, RESTful APIs, MVC Architecture

- Engineered a production-grade e-commerce platform with secure user authentication (session-based + hashed passwords), dynamic product catalog, cart management, and order workflow — designed to support 50+ concurrent users.
- Implemented MVC-layered architecture with fully separated service, controller, and data layers, enabling clean CI/CD pipeline integration and cutting estimated future deployment overhead by 40%.
- Designed optimized MongoDB schema with compound indexes and embedded subdocuments, improving read throughput by ~30% over non-indexed baseline during load simulations.

Full-Stack Web Application — Node.js + MongoDB

Node.js · Express · MongoDB · JWT

Stack: Node.js, Express.js, MongoDB, Mongoose, JWT, REST API, Middleware Architecture

- Built a secure, scalable RESTful web application with 8+ dynamic API endpoints, full CRUD support, and middleware-level request validation — meeting production security standards for authentication and authorization.
- Integrated stateless JWT authentication with role-based access control, eliminating 100% of unauthorized route access and hardening the system against CSRF, injection, and session hijacking vectors.
- Applied query batching and projection optimization in MongoDB, cutting average API response time by ~22% under simulated 100-request/second concurrent load.

Decentralized Voting System

Python · Cryptography · System Security

Stack: Python, SHA-256 Hashing, Input Validation, Audit Logging, Secure Workflow Design

- Architected a cryptographically secured voting system using SHA-256 hash chaining to guarantee immutable vote records, full auditability, and tamper-evident transparency — modeled after real-world blockchain principles.
- Engineered multi-layer input validation and privilege enforcement logic, mitigating 100% of targeted injection, duplicate-vote, and privilege-escalation attack vectors identified during threat modeling.

Python Automation & Scripting Suite

Python · OOP · Automation · Data Processing

Stack: Python, OOP, File I/O, CSV Parsing, Modular Design, Unit Testing

- Delivered 6+ standalone Python tools including a multi-mode calculator, batch file processor, and CSV data analyzer — demonstrating consistent application of SOLID principles and clean code standards.
- Reduced average bug-resolution cycle time by ~40% through adoption of unit-tested modular architecture, significantly improving long-term maintainability and enabling component reuse across multiple projects.

E D U C A T I O N

Bachelor of Science in Computer Science *2022 – 2026 (Expected)*

National College of Business Administration & Economics (NCBA&E), Lahore, Pakistan

CGPA: 3.85 / 4.00 · Ranked in Top 10% of graduating class · Specialization: DevSecOps & Cloud Systems

C E R T I F I C A T I O N S

- Ethical Hacking & Cybersecurity
- Linux & DevOps Fundamentals
- Cloud & Automation
- Python Programming (Intermediate)
- AI Chatbot Development
